

## 7OOP – Midtem Lab Task 1

### Problem #1

**Problem 1. Use Appropriate Escape Sequence( \n, \t \b \ ..etc)  
for the problem below**

Item Description

Create a program that prints the following text:

```
Database Record
////////////////////
Name:      John Doe
Email:     john.doe@example.com
University: ABC University
```

Sample Output 1

```
Database Record
////////////////////
Name:      John Doe
Email:     john.doe@example.com
University: ABC University
```

**Code:**

```
main.py x
1  #Problem 1
2  print("Database Record")
3  print("////////////////////////////////////")
4  print("Name:\t\tJohn Doe")
5  print("Email:\t\tjohn.doe@example.com")
6  print("University:\tABC University")
7
```

## Output:

```
Run: main x
C:\Users\COMLAB\PycharmProjects\pythonProject1\venv\Scripts\python.exe C:\Users\COMLAB\PycharmProjects\pythonProject1\main.py
Database Record
////////////////////////////////////
Name:      John Doe
Email:     john.doe@example.com
University: ABC University

Process finished with exit code 0
```

## Problem #2

**Problem 2. Using Placeholders for Email Details: Use appropriate type specifiers %s, %d, %f etc... for this task**

### Item Description

Write a program that prints the output below:

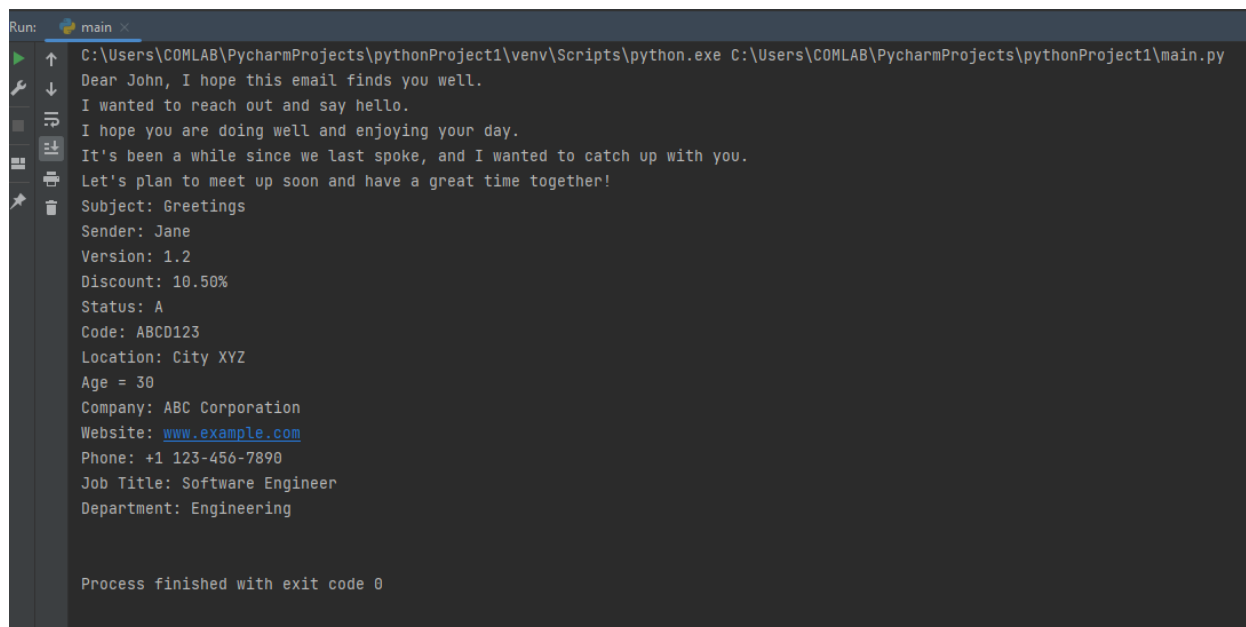

```
Dear John, I hope this email finds you well.
I wanted to reach out and say hello.
I hope you are doing well and enjoying your day.
It's been a while since we last spoke, and I wanted to catch up with you.
Let's plan to meet up soon and have a great time together!
Subject: Greetings
Sender: Jane
Version: 1.2
Discount: 10.50%
Status: A
Code: ABCD123
Location: City XYZ
Age: 30
Company: ABC Corporation
Website: www.example.com
Phone: +1 123-456-7890
Job Title: Software Engineer
Department: Engineering
```

The program should use placeholders to present the information accurately.

## Code:

```
main.py x
1  name = "John"
2  sender = "Jane"
3  version = 1.2
4  discount = 10.50
5  status = "A"
6  code = "ABCD123"
7  location = "City XYZ"
8  age = 30
9  company = "ABC Corporation"
10 website = "www.example.com"
11 phone = "+1 123-456-7890"
12 job_title = "Software Engineer"
13 department = "Engineering"
14
15 print("""Dear %, I hope this email finds you well.
16 I wanted to reach out and say hello.
17 I hope you are doing well and enjoying your day.
18 It's been a while since we last spoke, and I wanted to catch up with you.
19 Let's plan to meet up soon and have a great time together!
20 Subject: Greetings
21 Sender: %s
22 Version: %.1f
23 Discount: %.2f%%
24 Status: %s
25 Code: %s
26 Location: %s
27 Age = %d
28 Company: %s
29 Website: %s
30 Phone: %s
31 Job Title: %s
32 Department: %s
33 """) % (name, sender, version, discount, status, code, location, age, company, website, phone, job_title, department))
```

## Output:

The screenshot shows a PyCharm Run window with a dark theme. The title bar reads 'Run: main'. The command line shows the execution of a Python script: `C:\Users\COMLAB\PycharmProjects\pythonProject1\venv\Scripts\python.exe C:\Users\COMLAB\PycharmProjects\pythonProject1\main.py`. The output of the script is displayed in a monospaced font. It begins with a greeting to John, followed by a series of personal details and contact information. The details include a subject line, sender name, version, discount, status, code, location, age, company, website (a clickable link), phone number, job title, and department. The output concludes with a message indicating the process finished successfully with exit code 0.

```
Run: main
C:\Users\COMLAB\PycharmProjects\pythonProject1\venv\Scripts\python.exe C:\Users\COMLAB\PycharmProjects\pythonProject1\main.py
Dear John, I hope this email finds you well.
I wanted to reach out and say hello.

```

# Problem #3

## Problem 3. Book Reservation; Accept User Input

Write a program that asks the user to enter the title of a book (string), the author (string), the year of publication (int), the genre (string), the library (string), the member ID (string) and the return date (string). Print the entered values directly. The output should look like:

```
You have successfully reserved the book [Title] by [Author].
Year of Publication: [Year]
Genre: [Genre]
Library: [Library]
Member ID: [MemberID]
Return Date: [ReturnDate]
```

### Sample Output 1

```
Enter the book title: 1984
Enter the author: Orwell
Enter the year of publication: 1949
Enter the genre: Dystopian
Enter the library: Central
Enter your member ID: 12345
Enter the return date: 2023-07-10
You have successfully reserved the book '1984' by Orwell.
Year of Publication: 1949
Genre: Dystopian
Library: Central
Member ID: 12345
Return Date: 2023-07-10
```

### Sample Output 2

```
Enter the book title: Mockingbird
Enter the author: Lee
Enter the year of publication: 1960
Enter the genre: Fiction
Enter the library: Westside
Enter your member ID: 67890
Enter the return date: 2023-06-28
You have successfully reserved the book 'Mockingbird' by Lee.
Year of Publication: 1960
Genre: Fiction
Library: Westside
Member ID: 67890
Return Date: 2023-06-28
```

## Code:

```
main.py x
1  title = input("Enter the book title: ")
2  author = input("Enter the author: ")
3  year = int(input("Enter the year of publication: "))
4  genre = input("Enter the genre: ")
5  library = input("Enter the library: ")
6  member_id = input("Enter your member ID: ")
7  return_date = input("Enter the return date (YYYY-MM-DD): ")
8
9  print(f"\nYou have successfully reserved the book '{title}' by {author}.")
10 print(f"Year of Publication: {year}")
11 print(f"Genre: {genre}")
12 print(f"Library: {library}")
13 print(f"Member ID: {member_id}")
14 print(f"Return Date: {return_date}")
15
```

## Output:

```
Run: main x
C:\Users\COMLAB\PycharmProjects\pythonProject1\venv\Scripts\python.exe C:\Users\COMLAB\PycharmProjects\pythonProject1\main.py
Enter the book title: Life full of Errors
Enter the author: Whey
Enter the year of publication: 2003
Enter the genre: Suspense
Enter the library: Westside
Enter your member ID: PCS102
Enter the return date (YYYY-MM-DD): 2025-09-23

You have successfully reserved the book 'Life full of Errors' by Whey.
Year of Publication: 2003
Genre: Suspense
Library: Westside
Member ID: PCS102
Return Date: 2025-09-23

Process finished with exit code 0
```

# Problem #4

## Problem 4. Day Identifier

### Item Description

Write a program that takes an integer (1-7) as input and prints the corresponding day of the week based on the following conditions:

- If the input is 1, print "Monday"
- If the input is 2, print "Tuesday"
- If the input is 3, print "Wednesday"
- If the input is 4, print "Thursday"
- If the input is 5, print "Friday"
- If the input is 6, print "Saturday"
- If the input is 7, print "Sunday"
- If the input is any other value, print "Invalid input"

### Sample Output 1

```
Enter day: 1  
Monday
```

### Sample Output 2

```
Enter day: 4  
Thursday
```

### Sample Output 3

```
Enter day: 5  
Friday
```

## Code:

```
main.py ×
1  day = int(input("Enter day (1-7): "))
2
3  if day == 1:
4      print("Monday")
5  elif day == 2:
6      print("Tuesday")
7  elif day == 3:
8      print("Wednesday")
9  elif day == 4:
10     print("Thursday")
11  elif day == 5:
12     print("Friday")
13  elif day == 6:
14     print("Saturday")
15  elif day == 7:
16     print("Sunday")
17  else:
18     print("Invalid input")
```

## Output:

```
Run: main ×
C:\Users\COMLAB\PycharmProjects\pythonProject1\venv\Scripts\python.exe C:\Users\COMLAB\PycharmProjects\pythonProject1\main.py
Enter day (1-7): 4
Thursday
Process finished with exit code 0
```
